*Instagram clone built with Rails, React, Redux, JavaScript, HTML, CSS, PostgreSQL, JBuilder, and AWS*

- Implemented custom user authentication by using the gem Bcrypt to perform hashing function on backend for Rails along with frontend authentication through Javascript by enforcing protected and authorized routes
- Incorporated Amazon Web Services (AWS) on the backend to allow users to upload photos
- Formulated API through gem JBuilder to work with PostgreSQL to allow users to seed data
- Managed redux store to work alongside JBuilder and avoided deeply nested objects by maintaining a normalized state
